to our symmetrical elliptical profiles,
ours are easily distinguishable
to the discerning.

Features...

Patented fingertouch control
No tilt rod or unsightly control stick
No loose connecting pins or staples
Clear unobstructed views

Options...

Remote Control Sensing
Sound & Temperature Insulation
Security Features
Exotic Timbers

Featuring...

Louver Mover

SHUTTER BLADE ACTUATOR

ALUMINIUM

PLANTATION SHUTTERS

Setting the Benchmark...

Our Shutters are unique in the world of mediocre shutter designs. The 'Louver Mover' blade actuator obviates the need of unsightly control sticks and rods providing reliable operation and a clear view.

Our Aluminium blade profiles exactly match our timber blades allowing flexibility of choice to suit your project and design purpose.

Three frame choices - an intermullion, low profile and a high integrity stile

Two rail sizes - to suit small window or multiple bi folds or large door/structural facades

Large range of blade profiles - Five standard profiles Two custom contour blade designs

FIXED LOUVRES, PRIVACY SCREENS

More choices...

Fixed horizontal or vertical blade profiles offer versatile options in design such as privacy screening, pergola sun shading, wind screening or simply adding an architectural element to the facade of a building.

Options include -

- customizing the spacing and accenting of the blades to suit light and privacy criteria, insect screening
- Three blade contours available with or without frame. Fixed, hinged or facade mounted.

PLANTATION SHUTTERS

Classic...

Western Red Cedar is chosen for its stability and conformity as well as its natural beauty.

We hand select our softwood timbers by colour and grain blends to produce our Danish Oil Rubbed Cedar Shutters (we do not stain or lacquer)

Our Joiner's and Miller's craftwork is evident in the time tested traditional mortice and tennon jointing, hand sanding of every profile and the attention to final detail. We have successfully adapted age old practices with new technology such as the 'Louver Mover' to have arguably produced the world's finest shutter product (patent pending)

Six unique timber blade profiles

Two timber frame sizes (no mid rail required)

Hinged, Sliding, Bi fold or Fixed

Any Size, any shape, any configuration

Although we choose Western Red Cedar as our preferred medium we will evaluate or advise on specific applications if required as to the appropriateness of the installation.

GLASS LOUVRES

A clear alternative...

Introducing a design option well worth considering.

As a window alternative our louvres offer the ultimate in light and climate control. Perfect for conducive airflow and energy conservation and ideal for al fresco living spaces such as Loggias, Beach Houses, and Conservatories.

Features include -

Clear high impact UV satbilized end caps,

Low profile 'Pacifico' frame system

Standard Toughened Glass with polished edgework

Optional - Electronic remote control & sensing

Complies with current 125mm Buiding Code

Elegant, Functional and Secure
